

ABSTRACT

- 5 A method for producing wallpaper on-demand is accomplished by utilizing an on-demand printer. The printer is housed in a cabinet in which is located a media path. The path passes a printhead on the way to a dispensing slot. A user selects a pattern and a configuration for a roll of wallpaper. The user provides preferences via one or more printer input devices which communicate with a processor. Preferences may include a pattern and a configuration. The printer prints a roll of wallpaper, onto a web of blank media, on demand, according to the
- 10 selected pattern and configuration.
